These are the semantic HTML elements I want
<header>, <main>, <section>, <h1>, <h2>, , and <footer>.
1 minute ago
Here's the HTML using the semantic elements you listed:
html
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<title>Meet Bento: My Cat</title>
</head>
<body>
<header>
<h1>Meet Bento: My Cat</h1>
</header>
<main>
<section>
<h2>Bento's Daily Routine</h2>
Bento loves two things: sleeping and eating. He spends most of his day restir
</section>
<section>
<h2>Bento's Favorite Activities</h2>
At night, Bento becomes extremely playful. His favorite game is chasing me ar
</section>
</main>
<footer>
Thanks for visiting!
</footer>
</body>
</html>

Comparison:

comparison.md

In my HTML file written by hand, I was able to structure the semantic HTML tags better than the basic AI. In my handwritten HTML, I placed my headings inside their respective `<section>` tags and put the `<h1>` heading inside a `<header>` tag. The basic AI didn't bother to wrap the `<h1>` or `<h2>` headings in semantic containers. Although the basic AI used the correct heading hierarchy, there were no clearly defined sections in `basic-ai.html`.

In `directed.html`, I was able to tell Claude to use semantic HTML tags such as `<section>`, `<main>`, `<h1>`, `<h2>`, `<header>`, and `<footer>`. One difference between my handwritten HTML and the directed AI version was that the directed AI wrapped the entire main content inside a `<main>` tag, whereas I forgot to do that in mine.

I would accept the use of `<section>` because it helps organize related content under meaningful headings. I would also accept the `<main>` tag because it identifies the primary content of the webpage. However, I would improve the basic AI version by adding these semantic elements instead of leaving the headings and paragraphs directly inside `<body>`.

Overall, I think the directed AI version best represents my content because it has the clearest semantic structure. One improvement I would make is to change its generic footer to something more relevant to Bento.
